The tools of sky watching have changed over time. A stick poked into the ground to track the sun's shadows, a rock placed to make a point in the sky – these have given way to radio telescope arrays and satellites. But look closely at these images, and you'll see that the old saying is true: The more things change, the more they remain the same.

His escapes became metaphors for their personal freedom and newfound belief in themselves. Bill Martin works the same magic today.
